

Instant Job Matching (Pro)

Summary

Instant Job Matching automatically surfaces relevant job opportunities based on your trade and location, so you don't have to manually search for work.

What This Feature Does

Instant Job Matching is a **BuilderPal Pro** feature that helps subcontractors get faster access to new job opportunities.

Instead of searching manually every time, BuilderPal automatically checks for open jobs that match your:

- Selected trade
- Operating location
- Service area

When a match is found, it appears directly inside your **Job Connector** under the **Job Matches** view.

How It Works

Instant Job Matching uses information already set in your account:

- Your trade
- Your primary location
- Your service radius

When a general contractor posts a job that fits those details, BuilderPal automatically notifies you and places it into your **Job Matches** tab.

This lets you see relevant jobs without having to manually browse everything.

Where You'll See Matches

Inside **Job Connector**, jobs are organized into four views:

- **Job Matches** – Jobs automatically matched to you
- **Open Bids** – Jobs you’ve been approved to bid on
- **Requests** – Jobs you requested access to, but haven’t been approved for yet
- **Passed** – Jobs you chose not to pursue

Jobs are always sorted by **newest first**.

Pro Feature Note

Instant Job Matching is only available on **BuilderPal Pro**.

Subcontractors on the Free plan can still search for jobs manually, but won’t receive automatic matches.

Example Use Case

You’re a plumber based in Langley, BC, Canada.

A GC posts a plumbing job in your area.

BuilderPal automatically detects the match and places it into your **Job Matches** tab — no manual searching required.

From there, you can open the job, review details, and request to bid.
